

Enjoy More Freedom to Create

Brading Fabrication is committed to helping Architects and Builders incorporate our products into both high end residential or commercial projects. Silent Gliss products, in particular, can be used in a wide range of applications especially where there are requirements for high performance, high quality and long term reliability.

As an architect, Silent Gliss Products afford you the opportunity to create glass elements or interior spaces that are more impactful and dramatic. This opens up your creativity to develop highly unique or even “signature” architectural designs that will impress clients and win contracts.

Builders will enjoy the high quality and high performance of each of our products. Detailed installation instructions, exact fit components, and high performance engineering, means smoother flowing construction projects “without surprises” to delay construction schedules.

We provide comprehensive support materials to help you in the design and construction phases of your project. For example, all Silent Gliss products are ISO9001:2008 certified and are re-certified every three years. Certificates are available upon request. We can also supply you with CAD drawings, product brochures, design catalogues, installation instructions and other electronic tools. Please go to the [Resources page](#) for more information or [click here](#) at make an information request.
