

A Motorized, Insect-Free Fresh Air Solution

Elara FreshAir™ is a high quality motorized insect screen solution for bug-free indoor and outdoor living spaces. Powered by reliable and whisper quiet 24 volt DC Lutron or Gapos motors, Elara FreshAir™ can accommodate openings of up to 78" in width and 96" in height with a 3.5" x 3.5" low profile cassette (or up to 120" tall with an oversized cassette). What differentiates our motorized insect screen from others is its minimalist design, Italian-engineered hardware system for precision operation, unique ultra-thin inner and outer tracks to ensure perfect plumb lines (even with out-of-square openings). By using special rivet-reinforced insect mesh, this ensures to keep the fabric fully secure within the side tracks. An exterior grade, black bottom brush creates a tight seals on both floor or window sill applications.

The product line is available in white or bronze powder coated aluminum components and your choice of a Lutron or more cost effective Gapos motor (both are 24 volt DC). Elara FreshAir™ can be controlled through a hard wired wall switch or a hand held RF (radio frequency) remote. It can easily integrate into any 3rd party home automation system using RS232 or contact closure. Each system will provide years of trouble-free operation.

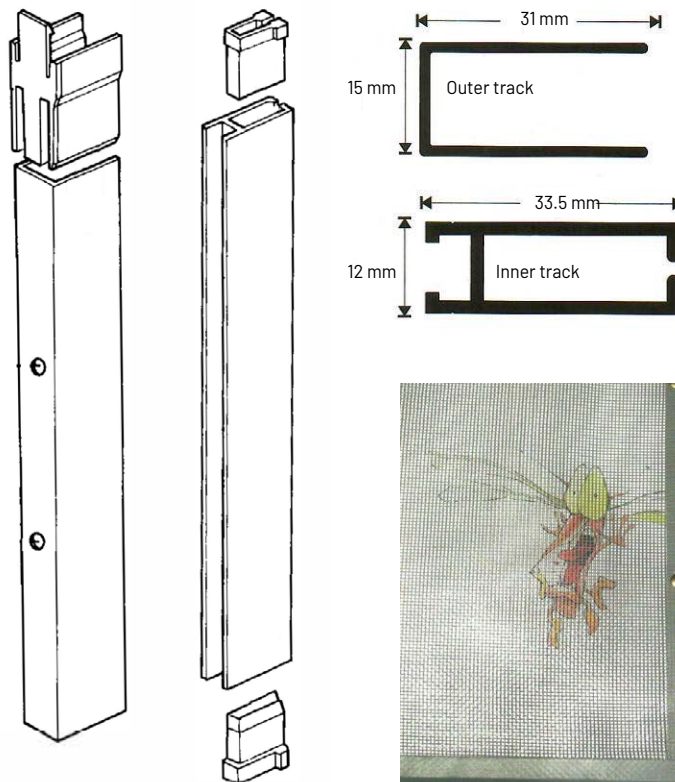

ELARASHADE™

ROLLER BLIND SYSTEM

Elara
FreshAir™

- highest quality motorized bug screen shades
- special low profile inner and outer tracks ensure a perfect plumb line for out of square applications
- ultra thin track thickness
- special rivets attached to mesh fabric ensure shade can not be pulled out of side tracks
- available with low voltage Lutron and Gaposa motors
- hardwired to wall switch or hand held RF (radio frequency) control
- can be integrated into 3rd party home automation systems via RS232 or contact closure
- low profile 3 1/2" x 3 1/2" cassette enclosure
- white or bronze powder coated aluminum
- UV resistant plastic components
- exterior grade black bottom brush pile (fuzz) to seal against floor or window sill
- swiss engineered hardware
- Minimum shade width of 18 1/2"
- maximum shade width of 78"
- maximum shade length of 96" with standard cassette
- maximum shade length of 120" with oversized cassette
